

S36.3

The trainee's perspective on research in ST

Ana Luisa Neves, Rosy Tsopra, Ivana Babić

VdGM

Research skills are a core competence for young GPs development, improving clinical decision-making, critical appraisal skills and personal curricular improvement. Using social media, we gathered data about young GPs experiences regarding the participation in research projects, the obstacles and challenges faced and their opinions about research skills training. We will also exemplify a specific case of a project carried out during specialty training.
